

HemoCue's Environmental Policy

HemoCue's environmental activities will be guided by commitment to and strive for continuous improvement. HemoCue will comply with applicable legal requirements and other applicable environmental requirements. We will also work to prevent pollution.

HemoCue will consider interested parties environmental requirements and provide relevant and appropriate environmental information about HemoCue products and processes to support their environmental work.

The environmental impact from HemoCue's products starts with the shipment of raw material to production and continues through the products' entire lifecycle. Our main objective is therefore to develop processes and products with consideration to the environment.

This involves:

- choosing raw material with care to minimize the environmental impact
- economizing with raw material and minimizing waste
- choosing our suppliers with care to minimize our indirect environmental impact

HemoCue will also take responsibility for the environment by:

- managing waste responsibly according to applicable requirements
- striving to use environmental friendly products
- educating and making employees take active interest in environmental issues
